

ABSTRACT OF THE DISCLOSURE

Verification of properness of a modeling theory of an uncrystallized substance or an image processing method is made
5 easy. There includes: a first displaying unit 120 for rotationally displaying an simulated three-dimensionally shaded model image, which is a shaded image of the three-dimensional reconstruction image; and a second displaying unit 140 for displaying the three-dimensional image of the substance acquired by experimental
10 structural analysis, which synchronously rotates with the simulated three-dimensionally shaded model image.
